Data Exchange for Sage 200
3rd party software integration

Connect Sage 200 with 3rd party software
Data Exchange for Sage 200 has been designed for seamless Sage 200 integration with 3rd party systems such as warehousing software, ERP software, CRM software or industry-specific solutions. Working with CSV and/or XML file formats, Data Exchange for Sage 200 automates the import and export of information, meaning you never have to re-enter data between your systems. Integration between Sage 200 and your other systems ensures that data is consistent and accurate throughout your whole business. If you need to transfer data to/from Sage 200 to other systems, look no further than Data Exchange!

Data Exchange seamlessly integrates Sage 200 with 3rd party applications allowing data to be imported and exported between the two. Transfer information such as:

- Customer records
- Sales/purchase orders
- Cash book
- Despatches
- Price book
- Invoices
- Product details
- Stock levels

The system is much more efficient and flexible than before and integration with our Purchase Order system has saved a great deal of time.

Eureka Solutions had the ability to customise Sage 200 to make it work the way we needed to, and continue to provide us with excellent support to assist our continued business growth.

Bill Gow, Finance Director
Goals Soccer Centres PLC
• Fully automated
By automating processes, Data Exchange for Sage 200 ensures that information is passed between two systems without any manual intervention. This means that data does not need to be re-entered in either system, and changes are visible immediately.

• Operates with CSV and/or XML files
Data Exchange can import and export both CSV and XML files over network or FTP.

• Full audit log generated
Obtain a full audit log of all successful and failed imports with notifications sent to system administrators if needed.

• Manage your business from one system
Integrating Sage 200 with your other solutions means that you can manage your whole business from one system.

• Cut data entry in half
Having to only update one system means that product changes only need to be made once, cutting data entry time in half.

• Integration with eBay and Amazon
Standard plugins available for integrating with eBay and Amazon to import orders directly into Sage 200.

• Column Aliasing
Map column headings from one system to another to avoid changing the source file.

• Automatically manage processes between datasets
Can be connected to multiple Sage 200 datasets.

• Export price book
Export information such as: product discounts, customer discounts, order value discounts and price bands.

• Import batch and serial numbered items
Data Exchange provides the ability to receive goods, add, write off, transfer and issue stock using batch/serial numbered items.

• Customisable
As well as being fully functional out-of-the-box, Data Exchange can be customised to meet your specific integration requirements.

• Reduce errors
Entering data changes only once ensures that errors through duplication are reduced, keeping data accurate throughout the business.

• Multiple FTP locations
This allows data to be exported to multiple data locations Also works with SFTP.
